

Journey iPhone App Tweaks

BLOGS

- 1. Date Display** – Simplifying the date display would clean up the interface a bit. Something like the example to the right would be great.
- 2. Line Height** – Removing excess spacing above and below the titles will allow for more visible entries listed on-screen.
- 3. Blog Title Spacing** – remove any excess space below the blog title, as that will also allow for better use of real estate.
- 4. Author information** – The blog author should be displayed below the title instead of the teaser text.

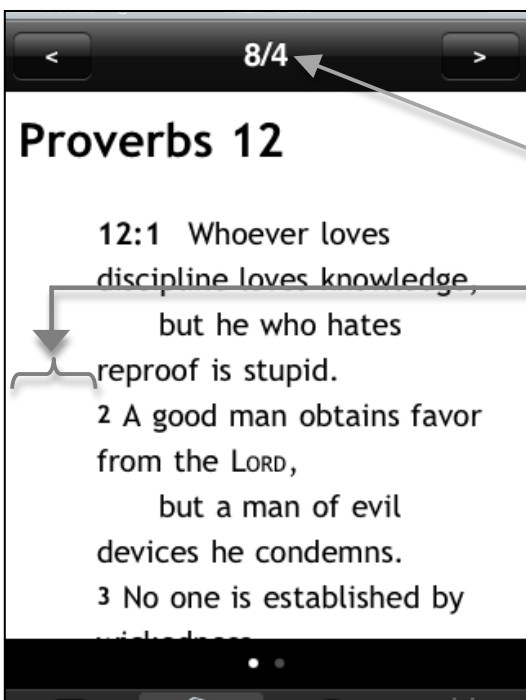

5. Blog Display – I would love if the blog display would actually pull in the content into an easy-to-read format on-screen, like the example shown to the right (instead of just showing the full blog page in a browser). This is a screenshot taken from an RSS reader app called MobileRSS.

- In our version of this view, the grey line could contain the author's name and blog date.
- This view utilizes full-screen reading & scrolling. Bringing back the navigation & toolbar would just be a simple tap.

Perspectives of Men – Texas is the Manliest (Again)

To Every Man A Manswer May 04, 2010 13:05

Just when you thought the Manliest State Battle Royale was over, Texas has come back for more. I've often heard everything is bigger in Texas, so it only makes sense that Texas gets two posts to prove its manliness. Today's guest post is from [Jason Boyett](#), who is no stranger to writing, this week is the official release week for his new book, [O Me of Little Faith: True Confessions of a Spiritual Weakling](#). Jason also has an impressive manly bio which includes, but

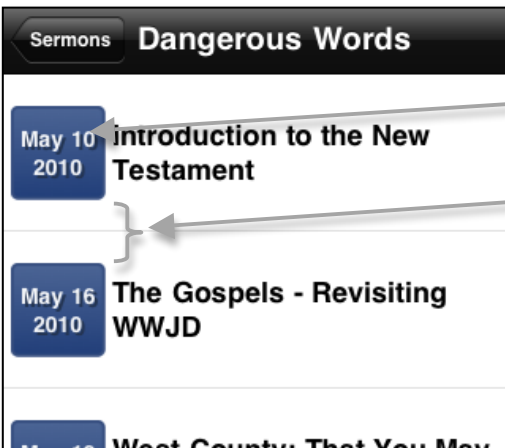

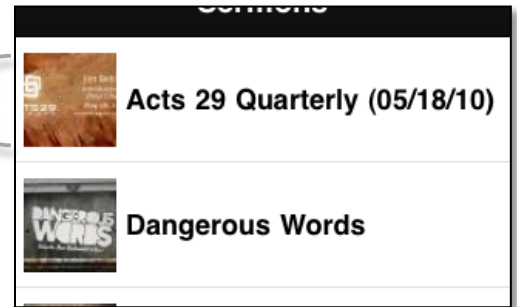

ENGAGE

- 1. Date Display** – Please change this to be partially relative. If the scriptures displayed are for the current date, make the date display "Today". When a user views another date, display abbreviated month text and day number (e.g. Aug 4).
- 2. Left Margin bug** (in Proverbs) – for some reason, when the chapter displayed is in Proverbs, the left margin is huge.
- 3. Reduce Font Size** – Reduce the font size of the text to be the same size as the sermon description text (when viewing a sermon in the app). This will improve use of space.
- 4. Full-screen reading** – It would be great if this view utilized full-screen reading & scrolling. Bringing back the navigation & toolbar would just be a simple tap.

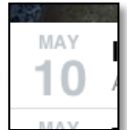

SERMONS

1. **Line height** (series list) – reduce the line height for each sermon series listed to be the same height as the thumbnail image. Again, this allows for better use of screen space.

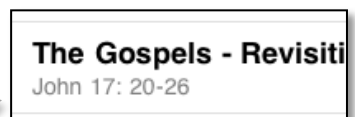

(sermon list inside a series)

2. **Date Display** – Again, simplify the date display to be similar to the example shown here on the right.

3. **Line Height** – remove the excess space above and below the date.

4. **Sermon Verses** – In smaller text, add the verse reference used by the sermon just below the title, similar to the example here on the right.

5. **Sermon View** – love it! Keep it! :)

EVENTS

So far, the events section has been pretty buggy and hasn't actually produced an event display view. If you need some valid events to pull data with, you should be able to find at least 2 here:

journeyon.onthecity.org/plaza/events.rss

Once we've been able to see a working event view, I can direct any tweaks/fixes your way if necessary.

We're almost finished!
